About

AI engineer focused on LLM applications, including Agents, RAG, and MCP. Skilled in Python and TypeScript across full-stack development, cloud deployment, and CI/CD, with open-source contributions.

Education

The University of Hong Kong

Hong Kong

Master of Science in Computer Science

Sep. 2025 – Nov. 2026

- GPA: 3.39/4.3; Relevant Coursework: Quantum Computing, Data Mining, Information Security, Big Data Management

Bachelor of Engineering in Computer Science

Sep. 2021 – Jun. 2025

- GPA: 3.56/4.3; First Class Honours, Dean's Honours List
- Relevant Coursework: Data Structures, Algorithms, Software Engineering, Databases, Machine Learning, Deep Learning, Natural Language Processing

Experience

Apple Inc.

Shanghai

AI Development Intern

May 2026 – Sep. 2026

- Led the delivery of a fault-monitoring and analysis Agent plugin for test engineers from requirements interviews and architecture design to deployment, packaging it as an Agent Skill; built a companion MCP Server, CLI tool, and PostgreSQL backend system, and integrated a Human-in-the-Loop ticketing workflow supporting manual ticket creation and linking.
- Designed a custom MCP Server for MB-scale test data from the iPhone production line validation phase, encapsulating the original multi-step, error-prone data fetching process into a single tool call to improve success rate, while processing data locally to keep raw data out of the Agent context; combined multiple sub-agents running site-parallel error attribution analysis, compressing the daily report generation cycle from several days to about one hour.
- Set up the CI/CD release pipeline for the Skill repository, including AI-powered PR review, automated artifact packaging and release, one-line-command installation, and an agent self-update mechanism.

The University of Hong Kong

Hong Kong

Research Assistant (Part-time)

Jul 2025 – Present

- Designing legal AI tools for HKU Law School teaching scenarios and developing and maintaining the AI legal research platform for the Law and Technology Centre.
- Maintaining and optimizing the AI Sentencing Predictor on HKLII: using LLMs to extract structured information from over 2,000 judgments with full manual review, building a review platform used by over 40 law students, and conducting statistical analysis and predictive modeling on the structured data; the model's median prediction error is within 3 months, with continuous adaptation to the latest Hong Kong legislation.

Student Research Assistant

Jun 2023 – May 2024, Sep 2024 – Jul 2025

- Designed and led multiple hands-on AI workshops at the HKU Makerspace (Innovation Wing), covering building chatbots with Azure AI services and developing multi-modal Retrieval-Augmented Generation (RAG) applications with layout detection for document understanding.
- Participated in cross-departmental student AI projects, including CLIC-Search: a semantic search engine for the Community Legal Information Centre, and a multi-modal history research assistant.

iFLYTEK Co., Ltd.

Shenzhen

Assistant Software Development Engineer

Jun 2024 – Aug 2024

- Contributed to the agile development of AI English-speaking tutor and AI picture book companion LLM applications in the education product line, designing and maintaining application workflows with *Node-RED*; automated data engineering workflows for model fine-tuning with *Python* and adapted product feature requirements through LoRA fine-tuning.
- Built and refined an LLM-as-a-Judge based evaluation pipeline to help screen and analyze bad cases, identify problem types, and iterate on prompts, completing a closed loop from bad case discovery and attribution to prompt optimization.

Projects

CLIC-Chat | *Next.js, Prisma, Azure, LLM, RAG*

- Developed a full-stack AI web application for Hong Kong legal content Q&A, building the system architecture with *Next.js* and *Prisma*.
- Parsed and cleaned Hong Kong legal data sources, including legislation, judgments, and legal articles, extracting structured information and building a relational database.
- Performed semantic chunking and vectorization of unstructured legal text, building a hybrid vector + keyword (BM25) retrieval index on *Azure AI Search*.
- Implemented a RAG-based Q&A system featuring query expansion, hybrid retrieval, relationship information extraction, and reranking, forming a complete pipeline from data processing and retrieval to generation.

zhipu-ai-provider | *Vercel AI SDK, TypeScript*

- Open-sourced and maintained a Vercel AI SDK provider for Zhipu (Z.ai) GLM series models, supporting text generation, streaming output, tool calling, multimodal, reasoning, and Embedding/image generation capabilities.
- Published to npm with over 230,000 downloads, widely used in AI projects across the TypeScript ecosystem.

Technical Skills

AI / LLM: RAG, Agent, MCP, LLM-as-a-Judge, Prompt Engineering, LoRA, LangChain, Azure AI Search, Vercel AI SDK, OpenAI API, Dify, n8n

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS

Frameworks and Platforms: Node.js, Next.js, React, Vue.js, TanStack, Flask, FastAPI, Tailwind CSS, Prisma, Chrome Extensions

Databases: MS-SQL, MongoDB, PostgreSQL, MySQL, ChromaDB

Tools and Deployment: Git, GitHub, Docker, Linux, Azure, AWS, Alibaba Cloud, Cloudflare, Vercel, Postman, Node-RED, Clerk

Libraries: Pandas, NumPy, Matplotlib, PyTorch, Scikit-learn, BeautifulSoup, Selenium
